

anti siphoning device

TECHNICAL SPECIFICATION

GB

DESCRIPTION

Anti siphoning device to prevent siphoning.

Siphoning in mini pump installations occurs when a discharge tube has a rise and large fall in the line. Any water below the reservoir level under the influence of gravity pulls any remaining water through the pump.

Siphoning can cause severe damage to a mini pump as the pump will run dry for a period of time resulting in premature wear of the pump, increased noise levels, and ultimately may cause the pump to stop working.

SPECIFICATIONS

- Connect to ID Ø 6 mm / ID Ø ¼" tubing.
- Patent Pending.

DESCRIPTION

Included with all Aspen mini pumps.

INSTALLATION
